

# MINI GROUT PLANT

The 1.50" Grout Plant is capable of pumping epoxy grouts, cementitious grout, heavily bodied materials, repair mortars, and also spraying fireproofing, waterproofing, EIFS, artificial rock work, stucco, and other commercial coatings.

**Model: Pneumatic  
15010GP-3-GAM**

## About the Equipment

Introducing Quikspray's 1.50" Carrousel® Grout Plant. This compact unit consists of a standard Carrousel® Pump and 31" U-Blend Mixer mounted onto a skid frame—making it one complete unit. The Grout Plant sits on 16" pneumatic tires which makes it easy to move on the job site. In addition, the skid frame has fork pockets installed to allow contractors to move the unit with a forklift.

The pumping system is easy to clean with just running a sponge ball and water through the system, no disassembly needed. The U-Blend mixer features a design with easy clean up in mind. The mixer uses Square-Drive Technology to enable the operator to remove the mixing blades with no tools and within seconds, to wash the blades. This speeds up cleanup time and the longevity of the equipment.

## Specifications

### Power Options

- 110v or 220v Electric
- Pneumatic
- Hydraulic

### Output Size

- Converta Hopper: Interchangeable
  - 1" ID
  - 1.25" ID
  - 1.50" ID

### Dimensions

- 48"x 38"x 56"
- Approximately 600 lbs.
