

GROUT PLANT™

The Grout Plant™ includes the combination of the time tested 2" Carrousel® Pump and U-Blend Mixer®. The Grout Plant™ can be either powered electrically or hydraulically and operates from one convenient location. The equipment can be disassembled quickly to fit through a standard three foot doorway and quickly reassembled ready for work or it can be mounted on a skid. The pump uses a peristaltic pumping action to move the material. The unique pumping design allows the pump to run dry all day without causing any damage. The Grout Plant™ can be outfitted with a spray gun for spraying shotcrete or other materials. Specifically designed to pump epoxy grout and fibrous mixes.

- ❑ Excellent machinery for epoxies and fibered materials
- ❑ One operator station minimize labor cost
- ❑ Extremely Portable—passes through 3ft opening
- ❑ Can run dry
- ❑ Fast and easy clean up
- ❑ Parker flat faced hydraulic fittings to reduce contamination
- ❑ Can be outfitted with spray gun for shotcrete and other materials
- ❑ Mixer has optional wheels for mobility
- ❑ All hydraulic (other power heads available upon request)
