

# CHIP SPRAYER™

for SEAMLESS FLOOR or WALL APPLICATION

The redesigned Quikspray Chip Sprayer™ permits the even distribution of large and small, variegated or mono colored chips for the seamless application. Even distribution will allow for less product waste, and less clean up. The low pressure/high volume blower reduces chip breakage, sometimes found with hand application. The overall length is less than 18", allowing this unit proper operation in confined or open application areas. Extremely high application rates are normal with the Chip Sprayer™, and the higher production will pay for this unit with one large project.

Increases Production by 10x

Even Distribution of Chip

Lightweight & Portable

Operates on Standard 110v

Rugged All Steel Construction

Easy To Use & Maintain

100% Coverage

Adjustable Air & Material Flow

Over a Gallon Hopper Capacity
